# apple notes exporter

February 14, 2025 · [read online](#)

---

Hi everyone,

I've just released a new app for macOS that allows you to export Apple Notes to the HTML files on your disc.

It's available here <https://apps.apple.com/us/app/noteseporter/id6741618455?mt=12>. Export functionality costs \$4.99.

If you need to backup your notes - try it.

PS If you paid for export functionality using alto.computer but want to use new app - write to me.

PPS I also have a new blog with my observations on tech. Please check it here <https://antiantihuman.com/> and subscribe if you want.

PPPS Also if you like running - join my Strava club <https://www.strava.com/clubs/antiantihuman> - lets give each other some kudos.

Anton
